```
"The complete genome sequence of Escherichia coli K-12.";

Science 277:1453-1474(1997).

- FUNCTION: THIS IS A COMPONENT OF THE PHOSPHOENOLPYRUVATE-DEPENDENT SUGAR PHOSPHOTRANSFERASE SYSTEM (PTS), A MAJOR CARBOHYDRATE ACTIVE CYVALENTLY BOUND BITA DOMAIN. THE BIB DOMAIN CONTAINS THE TRANSPORT SYSTEM. IT BELONGS TO THE BILD COMPAINS THE PHOSPHORYL TRANSFER DOMAIN. THE IID DOMAIN CONTAINS THE PHOSPHORYL TRANSFER DOMAIN. THE BILL-TRE-MEDIATED PHOSPHORYLATION OF TRANSFERIE CHURCHS TRANSPORT SYSTEM.

- TRANSFORT SYSTEM SYSTEM SYSTEM IS A COMPONENT OF THE MAJOR GLUCOSE TRANSPORT SYSTEM.

- I CATALYTIC ACTIVITY: PROTEIN N-PHOSPHOHISTIDINE + SUGAR PROTEIN HISTIDINE + SUGAR PHOSPHORY SYSTEM.

- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN. INNER MEMBRANE.

- SIMILARITY: CONTAINS A PTS BILD DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the European Bioinformatics Institute. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

variety. Cloning sites: EcoRI (5'-end of cDNA) and XhoI (3'-end of cDNA). NOTE: Due to a cloning artefact caused by the kit, in most cases the EcoRI site is NOT present, as well as the EcoRI adapter. Average insert size is 1 kb Sequence trimming: Vector sequences and sequence ends were trimmed from the 5' and 3'-end until a 50 bp window contains less than two ambiguities. The maximum length was set to 700 bp.

melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the Isogenic strain y2; on bw ap, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hypridization from the BACPAC Resource Center can be location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Department of Agronomy and Plant Genetics

/ Anot: cDNA was prepared from poly+ enriched RNA from effective root nodules harvested one month post incollation with Sinorhizoblum meillot!. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."

plants harvested 36 hours post shoot removal and nodules
collected from 2 month old plants at mid-pod stage"
/lab_host="E. coli strain SOLR"
/note="vector: pBluescript SK +/-; Site_1: EcoRI; Site_2:
xhoī; cDNA was prepared from polyA+ enriched RNA from the
mixture of effective nodules of 40 day old plants
at mid-pod stage. The
collected from 2 month old plants at mid-pod stage. The
collected from 2 month old plants at mid-pod stage. The
collected from 2 month old plants at mid-pod stage. The
collected from 2 month old plants at mid-pod stage. The
packaging extracts. Plasmids containing cDNA inserts were
excised from the recombinant lambda-ZAP phage using
Ex-Assist hadge and propagated in SOLR cells."

/issue__rype="senescent root nodules"
/dev_stage="mixture of effective nodules from 40 day old plants harvested 36 hours post shoot removal and nodules collected from 2 month old plants at mid-pod stage"
/lab_host="E. coli strain SOLR"
/note="Vector: pBluescript SK +/-; Site_1: BcoRI; Site_2: XhoI; cDNA was prepared from polyA+ enriched RNA from the mixture of effective nodules of 40 day old plants harvested 36 hours post shoot removal and nodules collected from 2 month old plants at mid-pod stage. The cDNA was directionally ligated into the Uni-ZAP KR vector from Stratagene and packaged using Gigapack III Gold packaging extracts; Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using excised from the recombinant lambda-ZAP phage using ex-Assist helper phage and propagated in SOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                        Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on w sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
